

Test Objectives:	Test for malware, XSS and other vulnerabilities. Ensure that access is just granted to the shared resources.
Techniques:	<ul style="list-style-type: none"> <li>• Create a standard test-suite using a tool which delivers a detailed report about vulnerabilities of known potential attacking techniques such as XSS.</li> <li>• Invalid access or access of non-existing resources should fail in retrieving anything.</li> </ul>
Completion Criteria	<ul style="list-style-type: none"> <li>• The access is not granted to not shared resources</li> <li>• The external test-report verifies secure functioning of the application</li> </ul>
Special Consideration	This testing may vary from each OS-environment and may not be required as it maybe a function of network or systems administration.
